Green & White Teas

Logo

Green tea is steamed or wok fried after harvest to halt oxidation. It is crisp and refreshing with a delicate vegetal flavor, low in caffeine compared to other teas, and high in cancer preventing antioxidants. Green tea is often compared to a super food containing B-complex, vitamin C, poly phenols and more. White tea is the least processed type of tea. It is air-dried to preserve all its nutrients and antioxidants. Urth's green and white teas are air shipped fresh from Japan and China all year long.
